However, in my view, one of the most powerful missions available to us is already here. It's in some of the most remote places on our planet. It's the exploration of our own planet that I believe will provide our greatest rewards, for we are destined to live on our planet for a very long time." \- Arthur C. Clarke ----- frew If we're going to colonize Mars, we're going to have to build a lot of containers to take the stuff from the plane into orbit. Titanic should be run with a decent graphics card and 4 GB RAM or above. You'll be able to play the game with a resolution of 1920x1080, which is the most common resolution for fullscreen mode. If you don't have 4 GB of RAM, then the game may not work or play correctly. It may also cause crashes and stability issues. That's all that's important.
