Sleep disturbance in children with Crohn's disease. Sleep disturbance in children with Crohn's disease (CD) has received little attention. Hence, the goal of this study was to investigate the prevalence of sleep disturbance in a pediatric CD population. Thirty-four children with CD and 34 healthy controls (HCs) aged between 6 and 16 years completed a sleep diary for one week. Children with CD exhibited a significantly higher number of awakenings during the night, fewer minutes of total sleep time, a higher number of ineffective sleep cycles, and a higher degree of parasomnias than did HCs. We concluded that children with CD are at high risk for sleep disturbance.
